1.1 Background information

Whole Blood Column Elution Buffer has been developed for the positive selection of leukocyte subsets from anticoagulated whole blood, buffy coat, LRSCs, or Leukopak® labeled with StraightFrom® MicroBeads in combination with a MACS® Separator.

1.2 Applications

- Elution of the positive cell fraction from a column after MACS Separation

1.3 Reagent and instrument requirements

- Separation buffer: Prepare a solution containing phosphate-buffered saline (PBS), pH 7.2, 0.5% bovine serum albumin (BSA), and 2 mM EDTA by diluting MACS BSA Stock Solution (# 130-091-376) 1:20 with autoMACS® Rinsing Solution (# 130-091-222). Keep buffer cold (+2 to +8 °C). Alternatively, use autoMACS Running Buffer. Degas buffer before use, as air bubbles could block the column.

▲ **Note:** BSA can be replaced by other proteins such as human serum albumin, human serum, or fetal bovine serum (FBS). Buffers or media containing Ca^{2+} or Mg^{2+} are not recommended for use.
