1.1 Background information

MHC MACSimer Control Reagents have been developed for the reliable exclusion of unspecific background signals during the detection and isolation of antigen-specific T cells using MHC MACSimers via flow cytometry. MHC MACSimer Control Reagents are offered in various human and murine MHC allele variants to match our MHC product portfolio. They are recommended to be used as a negative staining control when analyzing antigen-specific T cells using Peptide-loaded MHC MACSimers or MHC MACSimer FleX Kits, e.g., in the context of T cell receptor (TCR) epitope screening, TCR-T cell therapy development, or immune response monitoring.

For more information about the MHC multimer technology, refer to the MACS Handbook at **www.miltenyibiotec.com/MHC-multimers-handbook**.

1.2 Applications

- Detection and analysis of antigen-specific T cells by flow cytometry
- Sorting and enrichment of antigen-specific T cells by flow sorting or MACS® Technology

1.3 Reagent and instrument requirements

- Flow cytometer equipped with a red (640 nm), a blue (488 nm), and a violet (405 nm) laser, e.g., MACSQuant® Analyzer 10 (# 130-096-343) or MACSQuant Analyzer 16 (# 130-109-803)
- (Optional) MACStaining Buffer (# 130-109-803)
- (Optional) Cell sorter equipped with a red (640 nm), a blue (488 nm), and a violet (405 nm) laser, e.g., MACSQuant Tyto® (# 130-103-931)
